

Microsoft Expression Web 2007 Level 1

1 day course

Course Description

You want to make some information available on the Internet. To do this, you might want to design, build, and upload a website. The features and functions in Expression Web will enable you to create a website to suit your requirements.

Course Objective

You will create a website using Microsoft Expression Web.

Target student

This course is intended for students who want to create web pages and websites in a graphical application.

Prerequisites

Although experienced users will appreciate the extensive functions of Expression Web, no technical background is required to use the software. However, it may be helpful if a student has completed the following Systematix: HTML Web Authoring Level 1 and Cascading Style Sheets or has equivalent knowledge from another source.

Course Content:
